Management Summary

Growth has a tendency to slow down as the fall arrives and days get shorter.

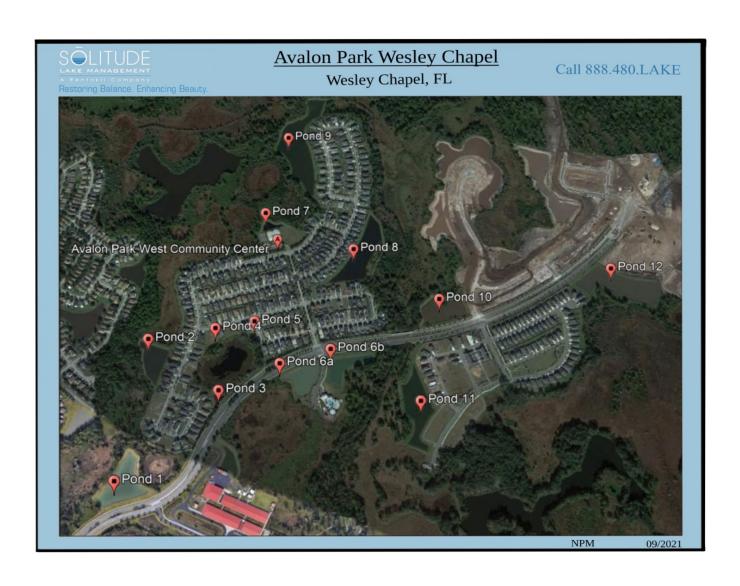

Sites 7 & 10 look largely improved from last month with a noticeable reduction in nuisance vegetation along the perimeters of both sites. Site 12 has some traces of cattails but you can already see the decay occurring from a previous treatment. Sites 2 & 4 still experiencing an uptick in shoreline weed growth including species such as alligatorweed and torpedograss.

Site 6B will need to retreated for hydrilla. While it is being suppressed it might take another treatment to gain control of the species.

All the other sites are in good condition with minimal to no nuisance vegetation along the perimeters of the sites.

Thank You For Choosing SOLitude Lake Management!

Wild Pig Removal

When "This Little Piggy" Has to GO!

We are proud to be a part of the solution for our area's wild hog problem.

BUSINESS PROPOSAL

WHAT ARE FERAL SWINE

Feral swine are the same species, Sus scrofa, as pigs that are found on farms. Feral swine are descendants of escaped or released pigs. Feral swine are called by many names including; wild boar, wild hog, razorback, piney woods rooter, and Russian or Eurasian boar. No matter the name they are a dangerous, destructive, invasive species. History of feral swine in the Americas Feral swine were first brought to the United States in the 1500s by early explorers and settlers as a source of food. Repeated introductions occurred thereafter. The geographic range of this destructive species is rapidly expanding and its populations are increasing across the nation.

Feral Swine Destroy Property

Feral swine can destroy lawns, gardens, ornamental plantings, and trees through rooting. They can also damage landscaping, fences, and other structures reducing the aesthetic value of the property. Although most often associated with rural areas, feral swine are increasingly causing damage to residential property, golf courses, beaches, and parks. Furthermore, feral swine can cause considerable damage when involved in vehicle collisions such as with cars and motorcycles.

Feral swine cause great risks to human health and safety, by harboring and transmitting diseases to people and pets Feral swine are known to carry at least 30 viral and bacterial diseases and nearly 40 parasites that can be transmitted to humans, pets, livestock, and other wildlife.

There are a variety of techniques that can be used to manage the damage caused by feral swine.

Not all techniques are suitable in every location or situation and, often, a combination of methods must be used to ensure success.

The most successful feral swine damage management strategies employ a diversity of tactics in a comprehensive, integrated approach. Factors to consider when choosing a management method(s) are overall objectives, landscape, environmental conditions, feral swine behavior and density, local regulations, and available funding. The appropriate method or combination of methods for the situation can be determined by utilizing the best information available which can be gathered from surveillance of damage and signs of feral swine on a specific property. Their reproduction rate is just off the charts, A female can have her firts litter at 7 months old and she can have around 12. Fifty percent of those would normally be female and these hogs can have up to three litters a year.
